

Incidence of HIV/AIDS among the 15-24 years-old population

Metadata for MDG Indicators
National Bureau of Statistics of the Republic of Moldova (NBS)

Definition	Number of new HIV infections among the 15-24 years-old population per 100 thousand inhabitants of the respective age.
Revised National MDG	MDG 6. Combating HIV/AIDS, TB and other diseases.
Unit of measurement	cases
Calculation formula	$I_{HIV} = \frac{N_{HIV}}{P_{tot}} * 100000$ <p>where:</p> <p>I_{HIV} - number of new HIV infections among the 15-24 years-old population on relation to 100 thousand inhabitants of the respective age, during the reference period;</p> <p>N_{HIV} - total number of HIV cases notified among the 15-24 years old population during the reference period;</p> <p>P_{tot} - total number of stable population of 15-24 years old, during the reference period.</p>
Level of disaggregation	Data are available for the whole country, as well as by: - sex
Dissemination periodicity	Annually
Timeliness	March 1 after the year of reference
Revision	Data are final when being disseminated for the first time.
Data source	1. Statistical Survey on “ <i>Infectious and parasitic diseases</i> ”, Ministry of Health. 2. Demographic Statistics, number of stable population, per age groups NBS
Comparability at the international level	Calculation methodology is in compliance with the recommendations of the World Health Organization. For details see health metadata: http://www.statistica.md/public/files/Metadate/en/Sanatate_en.pdf
Comparability over the time	Data are available starting with 1987. Starting in 1995 the toolkit for data collection was revised to collect information on the contingent of persons infected with HIV/AIDS in general and by age groups
Coherence with other statistics (correlated indicators)	Number of new cases of HIV infection among 15-24 years-old population per 100 thousand inhabitants of the respective age. Number of persons subject to HIV test, especially during the pregnancy period
